

# SimNet for Office 2003 Enterprise/Blackboard/WebCT Edition Office Suite

SimNet for Office 2003 is a complete and comprehensive computer-based learning and assessment tool for Microsoft Office applications, Computer Concepts, Windows XP Professional & Windows 2000. A total solution for your introductory computers and applications courses in one software package, with or without a textbook. SimNet is the first solution in introductory applications courses that truly offers an instructor the option to choose their prefer course management system, from McGraw-Hills own Enterprise Edition to Blackboard or WebCT:

1. SimNet Enterprise has a completely dedicated SimNet backend hosted by McGraw-Hill. There are no limitations on the number of student accounts per school or course. SimNet Enterprise offers a simplified menu structure and a new, more intuitive interface. This new design makes it easier to create and assign lessons and exams, and to post and access grades and reports. SimNet Enterprise offers a new top level administrator program that allows the SimNet Administrator to control all instructor accounts, including setting rights for each instructor which include:  
Register/edit/delete students  
Create/edit/delete classes/sections  
Create/edit/delete custom lessons  
Create/edit/delete custom exams  
View reports
2. SimNet BlackBoard is the first solution in introductory applications courses that truly integrates with your installation of Blackboard. This means that your students can access their SimNet assignments from within your Blackboard course, and their results are sent automatically to the Blackboard gradebook. No more need to export and import student results so you can use your preferred course management system. The Blackboard Edition of SimNet actually runs on top of the SimNet Enterprise server, which means that you can use all of

the administrator and instructor functionality available in the Enterprise Edition, including the extensive reports available, which are not available directly in Blackboard 3. SimNet WebCT is the first solution in introductory applications courses that truly integrates with your installation of WebCT. This means that your students can access their SimNet assignments from within your WebCT course, and their results are sent automatically to the WebCT gradebook. No more need to export and import student results so you can use your preferred course management system. The WebCT Edition of SimNet actually runs on top of the SimNet Enterprise server, which means that you can use all of the administrator and instructor functionality available in the Enterprise Edition, including the extensive reports available, which are not available directly in WebCT.
