C ++ Windows Programming

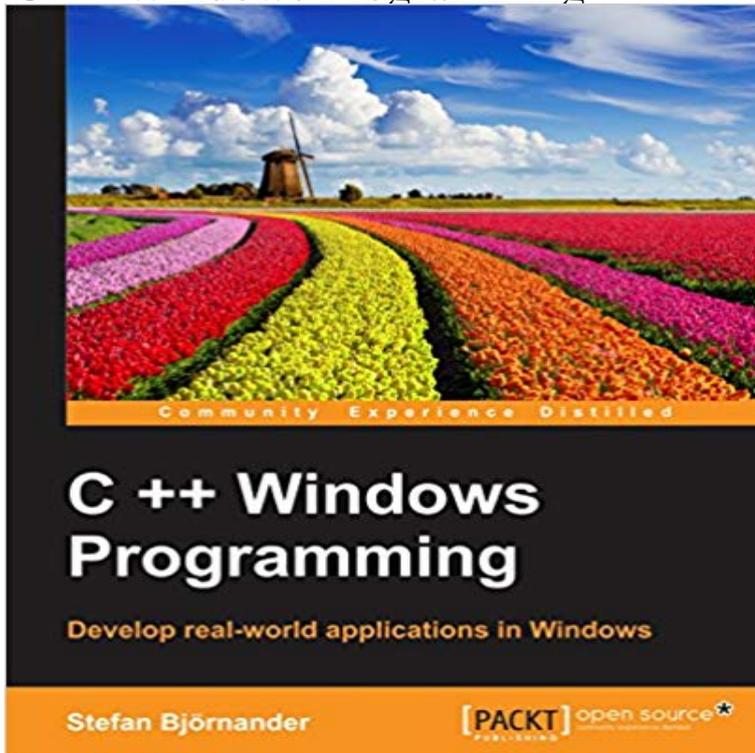

Key FeaturesCreate diverse applications featuring the versatility of Small Windows C++ libraryLearn about object-oriented programming in Windows and how to develop a rather large object-oriented class library in C++Understand how to tackle application-specific problems along with acquiring a deep learning about the workings of the Windows architectureBook DescriptionApplication development has gained massive popularity because of the immense impact it has on various sectors. In this booming market, it has become critical to have the right set of tools that will enable developers to build practical, user-friendly, and efficient applications. This book is focused on the use and implementation of Small Windows, which is a C++ object-oriented class library that will ease the development of interactive Windows applications.This first part of the book illustrates high-level application development using Small Windows. You will learn how to build four real-world applications, which focus on the general problems faced when developing graphical applications. Youll also see how to deal with specific problems regarding drawing, spreadsheet, and word processing applications. The latter part of the book explains the working of the Small Windows class library, which will give you all the insights you need to build your own object-oriented class library in C++.What you will learnDevelop advanced real-world applications in WindowsDesign and implement a graphical object-oriented class library in C++See the workings of the integral aspects of the Win32 API, such as mouse input, drawing, cut-and-paste, file handling, and drop filesIdentify general problems when developing graphical applications as well as specific problems regarding drawing, spreadsheet, and word processing applicationsThe implementation of the classes, function, and macros of the object-oriented class library developed in

the book and how we implement its functionality by calling functions and macros in the Win32 APIAbout the AuthorStefan Bjornander holds a Masters in Engineering in Computing Science. He has worked as a self-employed consultant in software development. He has also done a lot of teaching for the industry as well as for the university. He has lectured on C, C++, Java, Linux, and Windows as well as compiler construction. He authored Microsoft Visual C++ Windows Applications by Example for Packt Publishing, which gained great acclaim.
