

Recovery PC

The tutorial help solve a problem that is due now to computer manufacturers and assemblers do not provide external recovery units, such as DVDs, along with the computers they manufacture or assemble, leaving to the end user the task of making these units. Most users will postpone this task until the bad luck happens. Der need to restore or repair and are left with the only possibility of having to send the computer to the manufacturer, paid the price for the service, in addition exposing the data that was stored on the computer who will recover. So far for a basic user would be the only option that was mentioned above, but with this tutorial and following the steps you can do the recovery even though weak computer skills. This is because there is a partition that is hidden in the internal hard drive, allowing you the ability to recovery the factory settings. What happens is that all systems are likely to fail, which happens often to the point of not restart. This recovery through the hidden partition can be made when you press the computer power button then using the Alt + F10 keys, and until this point everything looks beautiful, but as this command is installed on the partition that has your damaged operating system are without possibility of use this command keys in most cases! In research on the internet I found that there is no tutorial that teaches in detail how you can get around this, and with some tutorials use complicated steps and others teach to travel around the world instead of solving the problem required. This tutorial teaches even the most basic user, how to recover through this partition, bypassing the problem of Alt + F10 failing. This is divided into parts, which I call it steps which are followed in the order any user can easily recover your computer, more being done with this tutorial screen shots, and in these is the order in which you have to follow.
