

# ActionScript Graphing Cookbook

Learn how to create appealing and interactive visual presentations of your data in ActionScript Overview Learn how to create various visually dynamic graphs and charts Import data from different sources, such as web services Learn how to map geographical data, visualize in 3D In Detail A picture is worth a thousand words has never been more true than when representing large sets of data. Bar charts, heat maps, cartograms, and many more have become important tools in applications and presentations to quickly give insight into complicated issues. The ActionScript Graphing Cookbook shows you how to add your own charts to any ActionScript program. The recipes give step-by-step instructions on how to process the input data, how to create various types of charts and how to make them interactive for even more user engagement. Starting with basic ActionScript knowledge, you will learn how to develop many different types of charts. First learn how to import your data, from Excel, web services and more. Next process the data and make it ready for graphical display. Pick one of the many graph options available as the book guides you through ActionScripts drawing functions. And when youre ready for it, branch out into 3D display. The recipes in the ActionScript Graphing Cookbook will gradually introduce you into the world of visualization. What you will learn from this book Import data from various sources Organize the various visual elements of a graph Draw many types of charts, such as bar, line and pie charts, meters and many more Make graphs interactive with hover and zoom effects Work with geographical data and maps Animate graphs with real time data Show and interact with network displays Discover three dimensional drawing and graphing Approach Step-by-step instructions guide you from your very first graphical program to highly complex 3D presentations. Although a few

recipes explain charts in Flex, this book is firmly focussed on using ActionScript code and data to draw graphs. Who this book is written for The ActionScript Graphing Cookbook is aimed at any ActionScript developer who wants to add data visualization to their skill set. The reader should be familiar with ActionScript basics, but no deep knowledge of any graphical functions is required.
