This revised edition continues to throw light on the significance of Business Engineering and its link with Information Technology. Besides, it discusses the role of consultants, vendors and users, the process of customization, as well as the methodology and guidelines for ERP implementation. The book focusses on Indian ERP packages, with a new section on Example of an Indian ERP Package. Provides Answers at the end of the book to most of the problems given at the end of each chapter for the benefit of both the students and the teachers. Intended for the discerning chief executives, functional managers, MIS managers and students of management courses, the book should also serve as a complete reference for understanding the concepts of ERP and enable organizations to implement ERP solutions.
