

Guide to Basic HTML

Make a website!
Guide to Basic <html>

By Leo Medley

NOTE: YOU DONT HAVE TO BE A GENIUS TO UNDERSTAND THIS! Lets say you want to make a website. You start with searching how to make a website on Google. You stumble across some business that will make it for you for if you pay them a tidy amount of money. You tell the person how you want the website, and pay them. The website wasnt how you pictured it and you are now paying a monthly fee to have the website on the internet. You want your own website, but dont know how to get one and wish there was a simple way to just make it your own self. Look no further, because guess what!? There is a way. Its called HTML. HTML stands for hyper-markup text language. HTML is a form of programming used to make websites. When you use HTML, you are programming your own website by typing a symbol of codes and characters that are easily modified and changed to your liking. The codes are used to represent parts of the website. Basically, you are just telling the computer to make you a website the way you want it, but in a foreign language. All you have to do is learn that language. I know, it sounds scary. However, once you get to reading, it will become more familiar. This guide will tell you how to make a website the way you want it and for free.
