

Performance of Distributed Systems and Integrated Communication Networks (IFIP Transactions C: Communication Systems)

This book explores new analytical techniques and tools for the performance evaluation of distributed and integrated computer communication systems. The systems considered are those arising in LAN, MAN, WAN broadband ISDN, and ATM switching. These systems are mathematically modelled and analysed. Analytical results are presented on the basic queueing models such as multi-queue, priority queue, queueing network, queue with bursty input and superposed input, and multi-server queue. These results can be usefully applied for the performance evaluation of all the above systems.

Performance of Distributed Systems and Integrated Communication of Distributed Systems and Integrated Communication Networks, Kyoto, Japan, (TC5) IFIP TRANSACTIONS C: Communication Systems 1992: 8 Volumes.
