

# SAP Enterprise Portal: Technology and Programming

This book is a complete overview for the installation, operation and administration of an SAP company portal (EP 6.0). Learn all there is to know about system requirements and the establishment of the portal in the system landscape. Get a step-by-step guide to the installation of a test system and discover how to adapt the portal to the requirements of the user and how to define roles. The book focuses very much on content and application integration. You learn how to program Web services and Portal iViews, plus all there is to know about Unifier, and by use of the SAP Business Information Warehouse you get in-depth knowledge on content-integration.
